## Coordinating Compounds

O-ORDINATION (OMPOUNDS

When Aq. sol ${ }^{n}$ of two or nore the of Sals es sulsjected to rustallize new of
compound is fommeal wrideconteins ef compound is fommed which conteins af
cons of both salts is called Adedition of conypdunds/Adrluct. And Swh reactionse: ave called

$$
\begin{aligned}
& \mathrm{KCl}(a q)+\mathrm{MgCl}_{2}(g q) \stackrel{\text { Gys }}{ } \mathrm{KCl} \cdot \mathrm{MaCl}_{2} \cdot 6 \mathrm{H}_{2} \mathrm{O} \text { Carnell } \\
& \text { Aetcliton conypounds el } \\
& 4 C N+F e(C N)_{2} \rightarrow 4 K C N \cdot F e(C N)_{2} \\
& \mathrm{CuSO}_{4}+4 \mathrm{NH}_{3} \rightarrow\left[\mathrm{Cu}\left(\mathrm{NH}_{3}\right)_{4}\right] \mathrm{SO}_{4}
\end{aligned}
$$

Adclition compounds are classifivel into two categories $\rightarrow$
(1) (x) 5 Ste $\rightarrow$ completely ionize in aqueous. Medium. exist only in solfd state not in aq. medium.
All ions show theiur presence in quir. In medium
All ions gives their otes.

$$
\begin{aligned}
& \mathrm{KCl}(\text { aq })+\mathrm{MgH}_{2} \xrightarrow{\text { Guy. }} \mathrm{KCl} \cdot \mathrm{MgCl}_{2} \cdot 6 \mathrm{~K}_{2} \mathrm{O} \text { Carmellite } \\

(Q) Find the formula of an calem havigis following properties $\rightarrow$
(1) Geues basic gas when react with NaOK
(6) Cries white pet when React with $\mathrm{BaCl}_{2}$.

$$
\mathrm{AW} \rightarrow(\mathrm{NH} 4)_{2} \mathrm{SO}_{4} \cdot\left(\mathrm{r}_{2}\left(\mathrm{SO}_{4}\right)_{3} \cdot 24 \eta_{2} \mathrm{O}\right.
$$

Does not ionize completely in (aq;) Mecliem
Conepouncl exist in solid state a cam exist in (aq.) Medium
Sone of the ions 100 es thine identity in aq. Medium, does not give heir tree qualitative test, does not show their presence in $q$. Medium.
eg. $k_{4} F e(C N)_{6}$
$K(N) \& F P(N)_{2}$ both are wigluly poisnous due to presence of $(C N)^{-}$ion. but when they form compound $K_{4} F e(C N)_{6} A+S$ aq, $801^{n}$ is no more poisnous, cyanide 50 n looses its identity, Ai son also not give test of $\mathrm{Fe}^{+2}$. $4 \mathrm{KCN} \mathrm{Fe}(\mathrm{CN}) \xrightarrow{\mathrm{H}_{2} \mathrm{O}}$ typegions $\frac{\text { the o. }}{3\left(\mathrm{~K}_{1}^{+}\left(\mathrm{N}_{1}-\frac{\text { Prac. }}{2\left(4 k^{+}+x\right.}\right.\right.}$ $\left.\mathrm{Fe}^{2+}\right) \mathrm{Fe}(\mathrm{CN})^{-c}$
$K^{\top} \vee F e^{2 \rho} \times$ an No.gions 11.5

Sons which are not ionized completely el. in aq. meclium looses their identity el in aq. meclisum written in squared bracket collectucly. Such ions is are called complex ions. \& tons pron In salt which contain such ions are called complex $x$ salt.

In Complex $x$ ion $\rightarrow$
Alteast one metal ion present whiche! is bonded by/surrouraletl by neutral nuolecules/ions by coorelinate bond. i.e why complex compounds are also named as Cooralination Compar. -bs.

Metal ion which is center of complex act as lewis aciol is called central Meter ion (CMI).

No. of lone pair accepter by a central Metal 10 n is called its coordination member.
Properties of CMI $\rightarrow$
(1) Small size
(2) f EXAMSROADOFFICIAL
(3) High Zeff
(4) Prescence of vacant or bital of Low energy.

General Coordination number $\rightarrow$
+3 ions of $3 d$ seluies $=6$ alinays
+2 ions of 30 series $=4 / 6$

$$
\begin{aligned}
& \mathrm{Ni}^{+2} \stackrel{\mathrm{H}_{2} \mathrm{O} / \mathrm{NH}_{3}}{\square} 6 \\
& \mathrm{Cl}^{\mathrm{C}} \mathrm{C} \\
& \left.P d^{2+}, P t^{2+}, A u^{3}, A_{d S P^{2}}{ }^{2} d^{8}\right)=4 \text { alvays } \\
& d s p^{2} \text { sq. planar dia. } \\
& P d^{4}+, P t^{4}+3=6 \text { aluays } \\
& d^{2} s p^{3} \text { diamag aluays }
\end{aligned}
$$

Aut, Agt $=2$ always
Config $\rightarrow d^{\prime 0}$ sprybricrication
Neutral Molecules or Jons which act as leuris base in complex formati -on are called ligands.
No. of lone pair donated by a ligand is caleed its denticity.
(Q) Find the denticity of neutral ligand $x$ in given complex.

$$
\text { Ans }=3 \quad P t^{4 t} \rightarrow C N=6
$$

Geometry $C$ Complex ion is catlect uoorelination polyhecler. eg $\rightarrow$ Tetrahedral, square planar Charge on complex ion is the sum e of oxiclation state of central metal $c$ ion or ligand.
Space in 3 d where coordinate bond e form bl central metal ion e ligands is cabled coorelenation sphere, part inside the siguare bracket represent He coordination sphere.
$\Rightarrow$ Species inside a coordenation sphere is non-ionizalsle while species present in ionization sphere is ionizalsle
Simple ions ariel form Sonic bound with complex ion es called counter ion.

\end{aligned}
$$

Classification of Complexes $\rightarrow$
(1) On the basis y charge

| Cationic | Anionic | Neutral |
| :---: | :---: | :---: |
| []$^{+}$ | []$^{-}$ | []$^{0}$ |
| So complex compouvel | may be |  |

(1)

Simple Cation
Complex Anion
fischer's salt $\mathrm{K}_{3}\left[\mathrm{Co}\left(\mathrm{NO}_{2}\right)_{6}\right]$ sodium Nitro preside

Na. [Fo reran Not
(2) Complex Cation

Switzer salt
Brown ring complex

Simple Anion

$$
\begin{aligned}
& {\left[\mathrm{Cu}\left(\mathrm{NH}_{3}\right)_{4}\right] \mathrm{SO}_{4}} \\
& {\left[\mathrm{Fe}\left(\mathrm{H}_{2} \mathrm{O}\right)_{5} \mathrm{NO}_{5} \mathrm{SO}_{4}\right.}
\end{aligned}
$$

(3) Complex Cation Complex Anion

$$
\left[\mathrm{Ag}\left(\mathrm{NH}_{3}\right)_{2}\right]\left[\mathrm{Ag}(\mathrm{CN})_{2}\right]
$$

[(4) Neutral complex $\rightarrow$
Osplatin (anti Cancer)

$$
\left[\mathrm{Pt}\left(\mathrm{NH}_{3}\right)_{2} \mathrm{Cl}_{2}\right]
$$

On the basis of type of Ligands $\rightarrow$

1) Homoleptic $\rightarrow$ Having only one type of ligand in coordination sphere.
fischer's $K_{3}\left[\mathrm{CO}\left(\mathrm{NO}_{2}\right]_{(3)}\right)$ $\underset{\substack{\text { Salter } \\ \text { salt }}}{ }\left[\mathrm{Cu}\left(\mathrm{NH}_{3}\right)_{4}\right] \mathrm{SO}_{4}$
2) Hetero leptic $\rightarrow$ More than one type of ligand present el en a coovelemation sphere.
Sodium Nitro
prussia
$\frac{\text { Brown ring }}{\text { complex }}\left[F e\left(\mathrm{H}_{2} \mathrm{O}\right)_{5} \times \mathrm{NO}_{3}\right] \mathrm{SO}_{4}$ complex $x$

Cisplation (anticancer).

$$
\left[P t\left(\mathrm{Nn}_{3}\right)_{2} \mathrm{Cl}_{2}\right]
$$

3) On the basis of No. of entreat Metal ion in a coordination sphere.
(a) Mononuclear
complexes $\rightarrow$ only one central metal ion present in a coordination
sphere.
(b) Poly nuclear complexes $\rightarrow$ Mole tran one CMI present in a co. sphere.

$$
\begin{aligned}
& K_{3}\left[\mathrm{Fe}(\mathrm{CN})_{6}\right] \\
& {[\mathrm{Cl}} \\
& 2-
\end{aligned}
$$

4) On the basis of Stability $\rightarrow$

$$
\begin{aligned}
& M+x L \underset{\text { ins }}{\underset{\text { af }}{\underset{~}{K}}[M\llcorner x]} \\
& k_{f}=\text { formation constant } \\
& \text { Kind }=\text { instability constant } \\
& k_{f}=\frac{1}{\text { Kind }} \\
& K_{f}=[M L x] \\
& {[M][L]^{*}} \\
& K_{f} \gg\left(K_{f} \uparrow\right) \\
& {\left[M L_{x}\right] \gg[M] \&[L]} \\
& k f<1 k+(\downarrow) \\
& {[M L x] \ll[M] \&[L]}
\end{aligned}
$$

Perfect complex $\rightarrow$
Having high value of formation canst. stable in presence of particuetar reagent.

Imperfect Complex
Low value of formation cons. $\left(k_{f}\right)$ unstable in presence of portimuar reagent

$$
\mathrm{CuSO}_{4}+\mathrm{KCN} \Longrightarrow \mathrm{Cu}_{1}(\mathrm{CN})_{2}+\mathrm{K}_{2} \mathrm{SO}_{4}
$$

$$
k^{+} \text {cu }(C N)_{4}^{3-} \text { - perfect }
$$

perfect w.r.t $\mathrm{H}_{2} \mathrm{O}$ w.r.t $\mathrm{H}_{2}$ s Imperfect writ to Hel

$$
\mathrm{CdSO}_{4}+\mathrm{KCN} \longrightarrow \mathrm{Cd}\left(\mathrm{CNO}_{2} \mathrm{Clile}+\mathrm{K}_{2} \mathrm{SO}_{4}\right.
$$

Kr of $k_{3}\left[G_{4}(C N)_{4}\right]>u_{2}\left[C d(L N)_{4}\right]$

All Ammonia and cyan complexes are in perfect in presume of strong arid.
There is no sharp boveler line to distinguish perfect $\rightarrow$ imperfect couple

- Xes.

They are defined in presence of particular reagent.

$$
\text { CLASSIFICATION OF } L I G A N D S \rightarrow
$$

On the basis of charge $\rightarrow$
(a) Anionic Ligomel $\rightarrow$ In the naming of Anionic liganel suffix ide is replaced ido/o

$$
\begin{aligned}
& \text { ate } \longrightarrow \text { att } \\
& \text { Ste } \longrightarrow \text { ite }
\end{aligned}
$$

As a counterion As a ligand

chloride
chlorialo
Sulphate
shlphatro
s ebonite
sui milo
(b) Neutral Ligands $\rightarrow$

Crenel name is used in the naming of neutral ligands except

$$
\begin{aligned}
& \mathrm{H}_{2} \mathrm{O} \text {-aqua } \\
& \mathrm{N}_{3} \text { - Ammine } \\
& \text { Co - Caresonye } \\
& \mathrm{No} \text { - Nitrosyl }
\end{aligned}
$$

(C) Cationic Ligands $\rightarrow$

Sum suffix is usecl in the naming of cattonil 18 gauds

$$
\begin{gathered}
\text { eg } \rightarrow \mathrm{NO}^{+} \rightarrow \text { Nitrosoniuns/Nitrosyliem } \\
\mathrm{N}_{2} \mathrm{O}_{5}^{+} \rightarrow \text { Hydrazinium }
\end{gathered}
$$

On the basis of Denticity $\rightarrow$ only one dong site $=$ mono dentate because they form only one coorelinde. bond with a CMI .

Having two donor site
form three member ling (Edge) compere
they act as monodentate because thees member lung is unstable dele to Angle Strain

unstable sing
form 4 member ring with CMI
4 member sing is stable than 3 member sing but less stable in comparison $5 / 6 / 7$ member ring ale to Angle strain Such igauds prefer to act as Mono dentate ligand but -as per req. y Coordination no. of CMI they can art as bidentate ligand ie why such ligands are known as flexidentabe ligand. -eg. all boxy anions

$$
c r t^{+3}, C N=6
$$

form $s / 6 / 7$ mendser $M i n \rightarrow$ art $\rightarrow$
as bidentate didenbat ligqual $e$ as bidentate, didentate ligaurd.
$\Rightarrow$ Leqanels Having 3 or molle donose site form s/6/7 membell ling act as polydentate.

Bdonor $\rightarrow$ tridentate
4 dowor $\rightarrow$ tetraclentate
Solonor $\rightarrow$ pentaidentate
6 donor $\rightarrow$ nexa dentate.
CHELLATNG LIGAND $\rightarrow$
When bedentate or polydentate legand coordenated with a central Metal Ion they form eing ieke structure such rings are called chellate rings and phenomena is called chellation, such ligancls are called chellating liganels
No. of chellate ling formed by a liganal zDenticity -1

$$
\begin{align*}
& \left.\left[\mathrm{Ni}_{2} \mathrm{NH}_{3}\right)_{6}\right]^{2+}+\mathrm{en} \longrightarrow\left[\mathrm{Ni}(\mathrm{en})\left(\mathrm{NH}_{3}\right)_{4}\right]^{2+}+2 \mathrm{NH}_{3}  \tag{1}\\
& {\left[\mathrm{Ni}\left(\mathrm{NH}_{3}\right)_{6}\right]^{2+}+2 \mathrm{en} \longrightarrow\left[\mathrm{Ni}(\mathrm{en})_{2}\left(\mathrm{NH}_{3}\right)_{2}^{2+}+4 \mathrm{NH}_{3}\right.} \\
& {\left[\mathrm{Ni}\left(\mathrm{NH}_{3}\right)_{6}\right]^{2+}+3 \mathrm{en} \longrightarrow\left[\mathrm{Ni}(\mathrm{en})_{0}\right]}
\end{align*}
$$

Ambidentate Ligand $\rightarrow$
Anionic Ligand having two or nor than two rift donor sites but uses one type of donor site when cocrelinated with a central metal ion such ligand are called Amesidentate ligands.
 this cyanate thin yang this cyanato iso thee yanato

Fiexidentate ligands $\rightarrow$
Ligands wrich cam show variatsle denticity.
Ligancls which form 4 member ring with CMI.
2) EDTA ${ }^{4}$ has pH dependent denticity 4
EDTA
$\uparrow r<$ acetate
tetral
dianuine
ethylene
